Von Liebermann and Andriska (22) suggested a method for estimating the quality of wheat flour which might possibly be correlated with a microscopical examination. The quality of the flour with respect to the quantity of bran substance present was ascertained by shaking the flour with chloroform, and observing the color of the portion which floated on the surface. The test might be rendered quantitative in the following manner: One gram of the flour was shaken in a tube with 10 cubic centimeters of chloroform, and the mixture allowed to stand for one hour.
