Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Principles of Industrial Engineering The subject matter of this book is substantially the text of a series of lectures prepared under the auspices of the Department of Mechanical Engineering of Columbia University, for delivery to senior students. As here presented, it takes the form evolved from three years experience in the class-room at Columbia, somewhat modified from the manner of the lecture platform, and adapted to meet the needs of a more general study as discovered by contact with non-technical audiences at Harvard and the New York University, and by many inquiries addressed to the Editorial Department of The Engineering Magazine. The original purpose when the work was undertaken at Columbia in 1908-09 was to lay the foundations for a composite course in Works Management, in which several eminent practitioners should follow with successive portions of the main structure. Experiment showed, however, that the better plan was to give these preparatory essays rather the character of a primary triangulation, covering the whole province, though it might be only in very broad outline. Further detail might then be filled in sectionally, as expedient, by specialists, each in his own subject. Thus, the discussion now reduced to printed chapters, was to be coordinated with certain lectures by Charles U. Carpenter, on factory and commercial organization; by Harrington Emerson, on the philosophy of efficiency; by H. L. Gantt, on scientific management; by R. T. Lingley, on factory accounting. It has not seemed feasible to co-ordinate these other lectures here so that the volume might present the entire argument. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a...
