Reviews

Excellent e-book and useful one. It can be rally intriguing throgh looking at time period. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Pasquale Klocko)

Book Condition: New. Publisher/Verlag: Springer, Berlin | 11th Annual Symposium on Theoretical Aspects of Computer Science, Caen, France, February 24-26, 1994. Proceedings | This volume constitutes the proceedings of the 11th annual Symposium on Theoretical Aspects of Computer Science (STACS '94), held in Caen, France, February 24-26, 1994. Besides three prominent invited papers, the proceedings contains 60 accepted contributions chosen by the international program committee during a highly competitive reviewing process from a total of 234 submissions for 38 countries. The volume competently represents most areas of theoretical computer science with a certain emphasis on (parallel) algorithms and complexity. | The nature and meaning of perturbations in geometric computing.- One binary horn clause is enough.- Transforming constraint logic programs.- A hierarchy of temporal logics with past.- The complexity of resource-bounded first-order classical logic.- Two proof procedures for a cardinality based language in propositional calculus.- The alternation hierarchy for machines with sublogarithmic space is infinite.- Quasilinear time complexity theory.- Space-efficient deterministic simulation of probabilistic automata.- Reachability and the power of local ordering.- Are parallel machines always faster than sequential machines?.- Ground reducibility and automata with disequality constraints.- Perpetuality and strong normalization in orthogonal term rewriting systems.- About changing the ordering during Knuth-Bendix completion.- Combination of matching algorithms.- Periodic constant depth sorting networks.- Optimal pattern matching on meshes.- Faster sorting and routing on grids with diagonals.- Deterministic 1 -k routing on meshes with applications to worm-hole routing.- A unifying type-theoretic framework for objects.- Operational specifications with built-ins.- Reactive variables for system specification and design.- A new parallel vector model, with exact characterization of Nck .- On adaptive dlogtime and polylogtime reductions.- $Nck(NP)=AC k?1(NP)$.- Hypertransition systems.- On the star operation and the finite power property in free partially commutative monoids.- Coding with traces.- Monadic second-order logic over pictures and recognizability by tiling systems.- Q-grammars: Results,...
